

REMARKS

The Examiner's indication that Claims 13-22 are allowable is acknowledged with appreciation.

While the Examiner is correct, in regard to the objection to Claim 23, that bis(3,3,5-trimethylhexanoyl)peroxide is not mentioned in Claim 22, bis(3,3,5-trimethylhexanoyl)peroxide happens to be a diacylperoxide (see page 7, lines 10-11 of the present application), which is a group that is articulated at the very end of Claim 22. Therefore, it is deemed that Claim 23 does properly further restrict Claim 22. Removal of the objection to Claim 23 is requested.

New Claims 26 and 27 are presented herewith to define the process as a two-step process and hopefully to better define the original subject matter of Claims 24 and 25 over the cited Fridy and Honsberg references.

Allowance of all pending Claims is solicited based on the comments contained herein.

Respectfully submitted,

Richard P. Fennelly
